

1    **Abstract of Disclosure**

2    A single-shot nail stapler includes a valve and a valve-opening rod for  
3    pushing the valve open. A major trigger includes two side members  
4    each with an upper portion pivotally attached to a portion of the  
5    single-shot nail stapler and a lower portion defining a substantially  
6    horizontal slit and a substantially vertical slot with an upper end and a  
7    lower end. A slide includes two side members each including a fin  
8    formed thereon and defining an inclined slot with an upper left end and a  
9    lower right end. The fins are movable in the substantially horizontal  
10   slits of the major trigger. A secondary trigger includes an upper portion,  
11   a lower portion and an aperture defined in the lower portion of the  
12   secondary trigger. A pin is fit in the aperture of the secondary trigger  
13   and movable in the inclined slots of the slide and the substantially vertical  
14   slots of the major trigger. Two springs are each compressed between the  
15   major trigger and each of the slide members of the slide. A security  
16   element extends movably between the side members of the major trigger  
17   for pushing the upper portion of the secondary trigger.
